

MAXFIELD'S GUIDE TO SOWING SEEDS GROWTEST

TIME REQUIRED About 15 - 60 minutes

TOOLS NEEDED Shovel, watering can or hose, seeds, Maxfield's Soil Conditioner & Maxfield's Planting Mix

- Amend your native soil with Maxfield's Soil Conditioner. (Visit www.maxfieldsorganics.com/tools-tips/ to see the corresponding video and checklist to see how).
- Use the rate chart on the back of Maxfield's Planting Mix to discover how much top dressing you'll want for your garden, we suggest 3 inches.
- Apply the desired amount of Maxfield's Planting Mix and spread evenly with your hands or shovel.
- Plant out where you want to put your seedlings and seeds (think about creating easy access to varieties you'll be harvesting more frequently, varietal needs of sun exposure, companion planting, etc).
- Read each variety's planting specifications to understand the best depth for each seed to be planted and how much space they need.
- Plant each seed with intention.
- Water seeds in thoroughly and wait to watch them grow.
- Every seed grows differently. Again, read the seed packet to understand time until emergence, instructions for care and total days until harvest.
- Check out our DIY video and checklist on Watering Plants at www.maxfieldsorganics.com/tools-tips/
