

MAXFIELD'S DIY GUIDE NATURAL VERMIN CONTROL

“Critters can become a huge hurdle in growing your own food.”

TIME REQUIRED:

2 - 5 HOURS AT THE START OF GARDENING SEASON
30 - 45 MINUTES PER WEEK FOR MAINTENANCE

TOOLS REQUIRED:

PICK & CHOOSE: MAXFIELD'S PLANTING MIX, FENCING,
SEEDS/SEEDLINGS: GARLIC, ONIONS, LAVENDER, CLOVER,
ALFALFA, WILD FLOWERS
HELPFUL HUNTING PETS, NATURAL REPELLENTS, SCARE DEVICES
(VISUAL AND/OR AUDITORY)

- Design your backyard with raised beds and fencing.
- Look for areas where critters could nest. Eliminate the possibility for vermin to make themselves at home by removing debris and blocking crawl spaces.
- Mulch raised beds and gardens with Maxfield's Planting Mix so critters will be reluctant to enter your garden.
- Interplant garlic, onions and lavender to deter animals from finding the more attractive crops near by.
- Perimeter plant clover, alfalfa and/or wildflowers in the corner of your yard or in shady areas where you wont be planting your edible crops.
- Allow cats and dogs to help stock and chase-off uninvited animals.
- Identify the critter that's harming your plants to find the best natural repellent or scare device to use.
