Made with compost, fir bark, and expanded shale, and mixed with our plant fertilizer blend, the Urban Tractor is meant to be incorporated into native soils and established raised beds for yearly re-amending.

Mixed with the same ingredients as the Urban Tractor, but larger amounts of fir bark and our plant fertilizer blend, the Nutrient Barn is meant for establishing raised beds or to be used as a top dressing in existing gardens or raised beds.

Our Soil Conditioner is a carbon-rich nutrient feast for existing soil. Ingredients: compost, fir bark, coconut coir, expanded shale, biochar, earthworm castings, oyster shell, alfalfa, blood meal, cottonseed meal, and mycorrhizae.

Our Planting Mix protects and promotes healthy plant growth. Ingredients: compost, coconut coir, fir bark, rice hulls, expanded shale, biochar, pumice, earthworm castings, oyster shell, alfalfa, blood meal, cottonseed meal, and mycorrhizae.

Our Potting Soil nourishes potted plants from seed to harvest. Ingredients: compost, coconut coir, perlite, rice hulls, expanded shale, pumice, biochar, earthworm castings, oyster shell, alfalfa, blood meal, cottonseed meal, and mycorrhizae.
